The Decision Making Network Carolina Academic Press

Eventually, you will unquestionably discover a extra experience and expertise by spending more cash. yet when? complete you bow to that you require to acquire those all needs later than having significantly cash? Why dont you attempt to acquire something basic in the beginning? Thats something that will lead you to comprehend even more as regards the globe, experience, some places, with history, amusement, and a lot more?

It is your totally own become old to do its stuff reviewing habit. in the midst of guides you could enjoy now is **The Decision Making Network Carolina Academic Press** below.

Handbook of Aging and the Social Sciences - Robert H. Binstock 2011-05-05
The Handbook of Aging and the Social Sciences, Sixth Edition provides a comprehensive summary and evaluation of recent research on the social aspects of aging. The 25 chapters are divided into four sections discussing Aging and Time, Aging and Social Structure, Social Factors and Social Institutions, and Aging and Society. Within this context, aging is examined from the perspectives of many disciplines and professions including anthropology, bioethics, demography,

economics, epidemiology, law, political science, psychology, and sociology. The Sixth Edition of the Handbook is virtually 100% new material. Seventeen chapters are on subjects not carried in the previous edition. Seven topics were carried over from the previous edition but written by new authors with fresh perspectives and brought up to date. Some of the exciting new topics include social relationships in late life, technological change and aging, religion and aging, lifestyle and aging, perceived quality of life, economic security in retirement, and aging and the law. There is also a greater emphasis on international perspectives, particularly in chapters on aging and politics, diversity and aging, and immigration. The Handbook will be of use to researchers and professional practitioners working with the aged. It is also suitable for use as a course text for graduate and advanced undergraduate courses on aging and the social sciences.

Conducting Personal Network Research -
Christopher McCarty 2019-02-22 Written at an introductory level, and featuring engaging case examples, this book reviews the theory and practice of personal and egocentric network research. This approach offers powerful tools for capturing the impact of overlapping, changing social relationships and contexts on individuals' attitudes and behavior. The authors provide solid guidance on the formulation of research questions; research design; data collection, including decisions about survey modes and sampling frames; the measurement of network composition and structure, including the use of name generators; and statistical modeling, from basic regression techniques to more advanced multilevel and dynamic models. Ethical issues in personal network research are addressed. User-friendly features include boxes on major published studies, end-of-chapter suggestions for further reading, and an appendix describing the main software programs used in the field.

Comparative Perspectives on Adult Guardianship - A. Kimberley Dayton 2014-04-10
This book comprises a compilation of chapter-essays from some of the world's leading authorities on adult guardianship law. The essays cover a wide range of topics from both theoretical and practical perspectives. Part I of the book introduces some of the basic concepts that transcend the national guardianship system, approaching these concepts from a comparative perspective. Part II's essays provide comprehensive information on guardianship systems around the world. Essays in Part III outline an ambitious agenda for reforming adult guardianship regimes. The book is a must read for those concerned with the role of national and international law in defining and expanding the rights of older persons and persons with disabilities who are at risk of being placed under guardianship due to cognitive or other disabilities.

Hard Questions for Democracy - Raj Chari 2019-07-09
The recent financial and economic crisis has forced governments and people from around the globe to ask some hard questions about how democracy has evolved. Some of these are old questions; others are new. Is democracy really the most desirable form of government? How democratic is policy-making during the financial and economic crisis? Why do vote-seeking parties in modern democracies actually make voters miserable? Can women's under-representation in politics be explained because of voter bias? Why are some citizens still excluded from voting in their country? And can terrorist organizations that promote violence one day, really become democratic the next? This represents the first book of its kind to ask and answer a broad range of hard questions that need to be addressed in times of both flux and calls for democratic change throughout the world. It does so by bringing together leading social scientists and rising stars from around the

globe. Interdisciplinary in its analysis, it is essential reading for students of comparative and international politics, political philosophy, gender studies and economics. The book's website can be found at: www.democracyquestions.com and it was originally published as a special issue of Irish Political Studies.

Coalitions in the Climate Change Negotiations - Carola Klöck 2020-11-22 This edited volume provides both a broad overview of cooperation patterns in the UNFCCC climate change negotiations and an in-depth analysis of specific coalitions and their relations. Over the course of three parts, this book maps out and takes stock of patterns of cooperation in the climate change negotiations since their inception in 1995. In Part I, the authors focus on the evolution of coalitions over time, examining why these emerged and how they function. Part II drills deeper into a set of coalitions, particularly "new" political groups that have emerged in the last rounds of negotiations around the Copenhagen Accord and the Paris Agreement. Finally, Part III explores common themes and open questions in coalition research, and provides a comprehensive overview of coalitions in the climate change negotiations. By taking a broad approach to the study of coalitions in the climate change negotiations, this volume is an essential reference source for researchers, students, and negotiators with an interest in the dynamics of climate negotiations.

Social Networks - John Scott 2002 This collection brings together the principal sources in the development of the techniques of social network analysis, from early metaphorical statements in Simmel and Radcliffe-Brown through the more systematic explorations in sociology and social anthropology, to contemporary formalizations. A new introduction explores the history of Social Networks and highlights the arguments of those who treat social network analysis as a loose, qualitative

approach as well as those who see its potential in technical, mathematical uses. The thematically organized coverage includes: * Part I: Conceptualizing Social Networks * Part II: Topics and Developments in Graph Theory * Part III: Further Mathematical Models for Networks * Part IV: Applications: Family and Community * Part V: Applications: Corporate Power and Economic Structures * Part VI: Applications: Political, Protest, and Policy Networks * Part VII: Applications: Knowledge, Reputation, and Diffusion

Handbook of Regional and Urban Economics - P. Nijkamp 1986
This second volume of the Handbook presents professional surveys of all the important topics in urban economics. The first section contains 6 surveys on locational analysis, the second, 5 surveys of specific urban markets, and the third part presents 5 surveys of government policy issues. The book brings together exhaustive research by distinguished scholars from many countries. It is the only complete survey volume of urban economics and should serve as a reference volume to scholars and graduate students for many years. For more information on the Handbooks in Economics series, please see our home page on http://www.elsevier.nl/locate/hes--

Impact Assessment and Evaluation in Transportation Planning - Peter Nijkamp 2012-12-06
Impact Assessment and Evaluation in Transportation Planning contains a refreshing approach to transportation planning by integrating impact analysis and evaluation methodology. It is original in that impact assessment and evaluation are brought together in a coherent framework. It is novel in the history of transportation science and particularly suitable as a pedagogical text, since methodologies are illustrated with various case studies and examples. It is particularly suitable for practitioners and students who want to

become acquainted with conflict analysis and plan/project evaluation in the area of transportation planning.

Managing Criminal Justice Organizations - Richard R.E. Kania 2018-10-03
Managing Criminal Justice Organizations: An Introduction to Theory and Practice, 3rd Edition, covers the formal and informal nature of the organizations involved in criminal justice. Kania and Davis provide an introduction to the administration, organization, and management of criminal justice organizations. This management aspect is the key to ensuring the proper running of criminal justice agencies in their efforts to combat crime. The book begins by discussing the eight principles of public management: leading, organizing, deciding, evaluating, staffing, training, allocating, and reporting. It then describes management positions in criminal justice. These include police and law enforcement management; managing the prosecution of criminal suspects; managing bail, bond, and pretrial detention services; managing victim and witness services; managing the judicial system; and managing adult corrections. The remaining chapters cover the pioneers and predecessors of modern public service management theory; leadership in criminal justice; bureaucracies and organizational principles; decision making and planning; performance evaluation, appraisal , and assessment; staffing and personnel issues; training and education for criminal justice; allocation of organizational resources; information management and organizational communications; and future issues in criminal justice management. This text is suitable for introductory criminal justice management courses, preparing students to work in law enforcement, corrections, and the courts. The companion website offers case studies, test banks, lecture slides, and handouts, exercises and forms for use in class.

Multicriterion Decision in Management -

Jean-Charles Pomerol 2012-12-06 Multicriterion Decision in Management: Principles and Practice is the first multicriterion analysis book devoted exclusively to discrete multicriterion decision making. Typically, multicriterion analysis is used in two distinct frameworks: Firstly, there is multiple criteria linear programming, which is an extension of the results of linear programming and its associated algorithms. Secondly, there is discrete multicriterion decision making, which is concerned with choices among a finite number of possible alternatives such as projects, investments, decisions, etc. This is the focus of this book. The book concentrates on the basic principles in the domain of discrete multicriterion analysis, and examines each of these principles in terms of their properties and their implications. In multicriterion decision analysis, any optimum in the strict sense of the term does not exist. Rather, multicriterion decision making utilizes tools, methods, and thinking to examine several solutions, each having their advantages and disadvantages, depending on one's point of view. Actually, various methods exist for reaching a good choice in a multicriterion setting and even a complete ranking of the alternatives. The book describes and compares these methods, so-called `aggregation methods', with their advantages and their shortcomings. Clearly, organizations are becoming more complex, and it is becoming harder and harder to disregard complexity of points of view, motivations, and objectives. The day of the single objective (profit, social environment, etc.) is over and the wishes of all those involved in all their diversity must be taken into account. To do this, a basic knowledge of multicriterion decision analysis is necessary. The objective of this book is to supply that knowledge and enable it to be applied. The book is intended for use by practitioners (managers, consultants), researchers, and students in engineering and business.

The Impact of Networks on Unemployment - J. M. Hurst 2016-10-12
This book investigates why networks, some with joined-up governance remits, appeared ineffective in handling neighbourhood unemployment even in periods when the national unemployment levels dropped. It deploys a multi-theoretical and methodological framework to investigate this empirical puzzle, and to test and analyse the causal factors influencing network outcomes. Chapters examine network concepts, network theories, outcome indicators, the historical infrastructure and management of unemployment policy, and governing network trends in post-war urban regeneration interventions. Comparative network case studies offer empirical evidence and a high degree of local variation. Mixed methods (qualitative and quantitative approaches), including social network analysis, uncover formal and informal networks, and eighty-six interviews in two English local authorities with persistent unemployment, give voice to network practitioner experiences. Findings explain why sub-optimal network outcomes prevail and operational difficulties persist on the ground. Students and academics, professionals and activists can use the results to challenge network governance theories and the policy status-quo.

Elder Abuse - XinQi Dong 2017-02-22
This book provides a global comprehensive and systematic state-of-the review of this field that fills the gaps between research, practice, and policy. The book addresses the epidemiology of the issue and the global prevalence of elder abuse in both developed and developing countries, which synthesizes the most up-to-date data about risk factors and protective factors associated with elder abuse and consequences of elder abuse; clinical assessment and management of elder abuse, including screening, detection, management of elder abuse, and the role of decision making capacity

and forensic approaches; practice and services that describe adult protective services, legal justice, elder court systems, and guardianship system; elder abuse and culture, which provides more in-depth anthropological and ethnographic experiences; policy issues, which highlights the elder justice movement, GAO reports, elder justice act, older American act and elder justice coordinating council; and future directions, which explores translational research, practice, education/training and policy issues surrounding elder abuse. Elder Abuse: Research, Practice and Policy is a useful resource for aging researchers, social services, general internists, family medicine physicians, social workers, nurses, and legal professionals interested in the issues of elder abuse.

Supported Decision-Making - Karrie A. Shogren 2018-11-30
The United Nations Convention on the Rights of Persons with Disabilities (CRPD) recognized that people with disabilities should have the right to exercise their legal capacity and identified 'supported decision-making' as a means by which people with disabilities can be directly involved in decisions that impact their lives. Offering an overview of its emergence in the disability field and highlighting emerging research, theory, and practice from legal, psychology, education, and health fields, this volume provides a much-needed theoretical and evidence base for supported decision-making. Evidence and strengths-based frameworks for understanding disability, supports, and their roles in promoting supported decision-making are synthesized. The authors describe the application of a social-ecological approach to supported decision-making, and focus on implications for building systems of supports based on current environmental demands. This volume introduces and explains empirical research on critical elements of supported decision-making and the applications of supported decision-making that enhance

outcomes, including self-determination and quality of life.

The Encyclopedia of Crime and Punishment - Wesley G. Jennings 2016-01-19
The Encyclopedia of Crime and Punishment provides the most comprehensive reference for a vast number of topics relevant to crime and punishment with a unique focus on the multi/interdisciplinary and international aspects of these topics and historical perspectives on crime and punishment around the world. Named as one of Choice's Outstanding Academic Titles of 2016 Comprising nearly 300 entries, this invaluable reference resource serves as the most up-to-date and wide-ranging resource on crime and punishment Offers a global perspective from an international team of leading scholars, including coverage of the strong and rapidly growing body of work on criminology in Europe, Asia, and other areas Acknowledges the overlap of criminology and criminal justice with a number of disciplines such as sociology, psychology, epidemiology, history, economics, and public health, and law Entry topics are organized around 12 core substantive areas: international aspects, multi/interdisciplinary aspects, crime types, corrections, policing, law and justice, research methods, criminological theory, correlates of crime, organizations and institutions (U.S.), victimology, and special populations Organized, authored and Edited by leading scholars, all of whom come to the project with exemplary track records and international standing 3 Volumes www.crimeandpunishmentencyclopedia.com

The Oxford Handbook of Political Networks - Jennifer Nicoll Victor 2018
Politics is intuitively about relationships, but until recently the network perspective has not been a dominant part of the methodological paradigm that political scientists use to study politics. This volume is a foundational statement about networks in the study of politics.

The Palgrave Handbook of Relational

Sociology - François Dépelteau 2018-01-10
This handbook on relational sociology covers a rapidly growing approach in the social sciences—one which is connected to the interests of a large, diverse pool of researchers across a range of disciplines. Relational sociology has been one of the key foundations of the "relational turn" in human sciences since the 1980s, and it offers a unique opportunity to redefine the basic epistemological and ontological principles of sociology as we know it. The contributors collected here aim to elucidate the complexity and the scope of this growing approach by dealing with three central questions: Where does relational sociology come from and what are its principal concerns? What are the main theoretical and methodological currents within relational sociology? What have we studied in relational sociology and what are the results?

Handbook of Contemporary Sociological Theory - Seth Abrutyn 2016-06-22
This Handbook provides the hidden common threads that tie sociological inquiry together and featuring eminent scholars, it separates itself from its predecessors in substance and organization. Rather than rehashing old debates or longingly gazing at the past, this book presents sociologists with new ways of conceptualizing the organization and presentation of sociological theory. At the heart of this Handbook's vision is the twin goals of making theory a viable enterprise by reconceptualizing how we teach theory and keeping theory closely tied to its empirical applications. Three strategies are offered: (1) Elucidating how classic issues like integration or interaction are interrogated today; (2) Presenting a coherent vision of the social levels of reality that theorists work on such as communities, groups, and the self as well as how the coherence of these levels speaks to the macro-micro link; and, (3) Theorizing the social world rather than celebrating theorists or

theories; that is, one can look at how theory is used holistically to understand the constraints the social world places on our lived experience or the dynamics of social change. Hence, in the second decade of the 21st century, it has become clear that sociology is at a crossroads as the number of theorists and amount of theory available is increasingly unmanageable and unknowable by the vast majority of professionals and students. As such, this Handbook of Contemporary Sociological Theory presents the novice and the expert with the a roadmap for traversing this crossroad and building a more coherent, robust, and cumulative sociology.

Sustainability in European Environmental Policy - Rob Atkinson 2010-10-18
This book examines sustainability in European environmental policy and explores the related challenges of governance and knowledge. It provides an assessment of the EU sustainability strategy and concentrates on three key directives: Air Quality Management, Strategic Environmental Assessment, and the Emissions Trade System. The authors develop an innovative analytical model for the study of governance for sustainability, focusing on the potential synergies between new governance modes and different forms of knowledge. This cross national and comparative volume features research on nine Europea

Routledge Handbook of Corrections in the United States - O. Hayden Griffin III 2017-09-01
The Routledge Handbook of Corrections in the United States brings together original contributions from leading scholars in criminology and criminal justice that provide an in-depth, state-of-the-art look at the most important topics in corrections. The book discusses the foundations of corrections in the United States, philosophical issues that have guided historical movements in corrections, different types of punishment and supervision, trends in incarceration, issues affecting race, ethnicity, and special populations in corrections,

and a variety of other emerging issues. This book scrutinizes innovative community programs as well as more traditional sanctions, and exposes the key issues and debates surrounding the correctional process in the United States. Among other important topics, selections address the inherent discrimination within the system, special issues surrounding certain populations, and the utilization of the death penalty as the ultimate punishment. This book serves as an essential reference for academicians and practitioners working in corrections and related agencies, as well as for students taking courses in criminal justice, criminology, and related subjects.

Stress, Trauma, and Wellbeing in the Legal System - Monica K. Miller 2013
Stress, Trauma, and Wellbeing in the Legal System presents theory, research, and scholarship from a variety of social scientific disciplines and offers suggestions for those interested in exploring and improving the wellbeing of those who are voluntarily or involuntarily drawn into the legal system.

Cybercrime in Progress - Thomas J Holt 2015-12-14
The emergence of the World Wide Web, smartphones, and computers has transformed the world and enabled individuals to engage in crimes in a multitude of new ways. Criminological scholarship on these issues has increased dramatically over the last decade, as have studies on ways to prevent and police these offenses. This book is one of the first texts to provide a comprehensive review of research regarding cybercrime, policing and enforcing these offenses, and the prevention of various offenses as global change and technology adoption increases the risk of victimization around the world. Drawing on a wide range of literature, Holt and Bossler offer an extensive synthesis of numerous contemporary topics such as theories used to account for cybercrime, policing in domestic and transnational contexts,

cybercrime victimization and issues in cybercrime prevention. The findings provide a roadmap for future research in cybercrime, policing, and technology, and discuss key controversies in the existing research literature in a way that is otherwise absent from textbooks and general cybercrime readers. This book is an invaluable resource for academics, practitioners, and students interested in understanding the state of the art in social science research. It will be of particular interest to scholars and students interested in cybercrime, cyber-deviance, victimization, policing, criminological theory, and technology in general.

Strategic Networks - Michael Gibbert 2009-02-04
This book explores the creation of 'learning networks' and shedslight on how they function:-real versus virtual forms ofinteraction, collaboration versus competition in the learningprocess, and joint value creation versus individual valueappropriation in networks.

Written by international experts in the field of globalstrategy. Contributions have been selected for their insights andinterdependence between organizational learning and networks. Looks at topics such as real versus virtual forms ofinteraction, collaboration versus competition in the learningprocess, and joint value creation versus individual valueappropriation in networks.

Introduction to Policing - Gene L. Scaramella 2010-12-09
Focusing on the thought-provoking, contemporary issues that underscore the challenging world of policing, this easy-to-understand text balances theory, research, and practice to give students a comprehensive overview of both the foundations of policing and the expanded role of today's police officers. The engaging writing style and stories from the field, coupled with unique coverage of the issues of policing in multicultural communities the impact of globalization on policing, make this book a

must have for policing courses

Systems Science and Cybernetics - Volume III - Francisco Parra-Luna

The subject "Systems sciences and cybernetics" is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of (primarily social) objects and arising in response to the need for globalized treatment of such objects. This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects, advances in the theories on their inter-relations, the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject-object interaction, not to mention the urgent need to control the efficiency of complex systems, where "efficiency" is understood to mean the ability to find a solution to many social problems, including those posed on a planetary scale. The result has been the forging of a new, academically consolidated scientific trend going by the name of Systems Theory and Cybernetics, with a comprehensive, multi-disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic. This subject entry is subdivided into four sections. The first, an introduction to systemic theories, addresses the historic development of the most commonly used systemic approaches, from new concepts such as the so-called "geometry of thinking" or the systemic treatment of "non-systemic identities" to the taxonomic, entropic, axiological and ethical problems deriving from a general "systemic-cybernetic" conceit. Hence, the focus in this section is on the historic and philosophical aspects of the subject. Moreover, it may be asserted today that, beyond a shadow of a doubt, problems, in particular problems deriving from human interaction but in general any problem regardless of its nature, must be posed from a systemic perspective, for otherwise the obstacles to their solution are insurmountable. Reaching such a perspective

requires taking at least the following well-known steps: a) statement of the problem from the determinant variables or phenomena; b) adoption of theoretical models showing the interrelationships among such variables; c) use of the maximum amount of – wherever possible quantitative – information available on each; d) placement of the set of variables in an environment that inevitably pre-determines the problem. That epistemology would explain the substantial development of the systemic-cybernetic approach in recent decades. The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems, from issues that affect humanity as a whole to minor but specific questions arising in human organizations. Certain sub-themes are discussed by the various authors – always from a didactic vantage –, including: problem discovery and diagnosis and development of the respective critical theory; the design of ad hoc strategies and methodologies; the implementation of both qualitative (soft system methodologies) and formal and quantitative (such as the "General System Problem Solver" or the "axiological-operational" perspective) approaches; cross-disciplinary integration; and suitable methods for broaching psychological, cultural and socio-political dynamisms. The third section is devoted to cybernetics in the present dual meaning of the term: on the one hand, control of the effectiveness of communication and actions, and on the other, the processes of self-production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed. Known as "second order cybernetics", this provides an avenue for rethinking the validity of knowledge, such as for instance when viewed through what is known as "bipolar feedback": processes through which interactions create novelty, complexity and diversity. Finally, the fourth

section centres around artificial and computational intelligence, addressing sub-themes such as "neural networks", the "simulated annealing" that ranges from statistical thermodynamics to combinatory problem-solving, such as in the explanation of the role of adaptive systems, or when discussing the relationship between biological and computational intelligence.

An Annotated Timeline of Operations Research - Saul I. Gass 2005
Arising from the urgent operational issues of World War II, the philosophy and methodology of Operations Research (OR) has permeated the resolution of decision problems in business, industry, and government. This work recounts the evolution of OR as the science of decision making. It chronicles the history of OR in the form of expository entries.

Governance Networks in the Public Sector - Erik Hans Klijn 2015-08-28
Governance Networks in the Public Sector presents a comprehensive study of governance networks and the management of complexities in network settings. Public, private and non-profit organizations are increasingly faced with complex, wicked problems when making decisions, developing policies or delivering services in the public sector. These activities take place in networks of interdependent actors guided by diverging and sometimes conflicting perceptions and strategies. As a result these networks are dominated by cognitive, strategic and institutional complexities. Dealing with these complexities requires sophisticated forms of coordination: network governance. This book presents the most recent theoretical and empirical insights into governance networks. It provides a conceptual framework and analytical tools to study the complexities involved in handling wicked problems in governance networks in the public sector. The book also discusses strategies and management recommendations for governments, business and

third sector organisations operating in and governing networks. Governance Networks in the Public Sector is an essential text for advanced students of public management, public administration, public policy and political science, and for public managers and policymakers.

Networks and Network Analysis for Defence and Security - Anthony J. Masys 2014-02-10 Networks and Network Analysis for Defence and Security discusses relevant theoretical frameworks and applications of network analysis in support of the defence and security domains. This book details real world applications of network analysis to support defence and security. Shocks to regional, national and global systems stemming from natural hazards, acts of armed violence, terrorism and serious and organized crime have significant defence and security implications. Today, nations face an uncertain and complex security landscape in which threats impact/target the physical, social, economic and cyber domains. Threats to national security, such as that against critical infrastructures not only stem from man-made acts but also from natural hazards. Katrina (2005), Fukushima (2011) and Hurricane Sandy (2012) are examples highlighting the vulnerability of critical infrastructures to natural hazards and the crippling effect they have on the social and economic well-being of a community and a nation. With this dynamic and complex threat landscape, network analysis has emerged as a key enabler in supporting defence and security. With the advent of 'big data' and increasing processing power, network analysis can reveal insights with regards to structural and dynamic properties thereby facilitating greater understanding of complex networks, their entities, interdependencies, vulnerabilities to produce insights for creative solutions. This book will be well positioned to inform defence, security and intelligence professionals and researchers with regards to leading

methodologies and approaches.

Handbook of Systems Engineering and Management - Andrew P. Sage 2014-12-31
The trusted handbook—now in a new edition This newly revised handbook presents a multifaceted view of systems engineering from process and systems management perspectives. It begins with a comprehensive introduction to the subject and provides a brief overview of the thirty-four chapters that follow. This introductory chapter is intended to serve as a "field guide" that indicates why, when, and how to use the material that follows in the handbook. Topical coverage includes: systems engineering life cycles and management; risk management; discovering system requirements; configuration management; cost management; total quality management; reliability, maintainability, and availability; concurrent engineering; standards in systems engineering; system architectures; systems design; systems integration; systematic measurements; human supervisory control; managing organizational and individual decision-making; systems reengineering; project planning; human systems integration; information technology and knowledge management; and more. The handbook is written and edited for systems engineers in industry and government, and to serve as a university reference handbook in systems engineering and management courses. By focusing on systems engineering processes and systems management, the editors have produced a long-lasting handbook that will make a difference in the design of systems of all types that are large in scale and/or scope.

The Connected City - Zachary P. Neal 2012-08-06
The Connected City explores how thinking about networks helps make sense of modern cities: what they are, how they work, and where they are headed. Cities and urban life can be examined as networks, and these urban networks can be examined at many different

levels. The book focuses on three levels of urban networks: micro, meso, and macro. These levels build upon one another, and require distinctive analytical approaches that make it possible to consider different types of questions. At one extreme, micro-urban networks focus on the networks that exist within cities, like the social relationships among neighbors that generate a sense of community and belonging. At the opposite extreme, macro-urban networks focus on networks between cities, like the web of nonstop airline flights that make face-to-face business meetings possible. This book contains three major sections organized by the level of analysis and scale of network. Throughout these sections, when a new methodological concept is introduced, a separate 'method note' provides a brief and accessible introduction to the practical issues of using networks in research. What makes this book unique is that it synthesizes the insights and tools of the multiple scales of urban networks, and integrates the theory and method of network analysis.

Encyclopedia of Social Networks - George A. Barnett 2011-09-07
Request a FREE 30-day online trial to this title at www.sagepub.com/freetrial This two-volume encyclopedia provides a thorough introduction to the wide-ranging, fast-developing field of social networking, a much-needed resource at a time when new social networks or "communities" seem to spring up on the internet every day. Social networks, or groupings of individuals tied by one or more specific types of interests or interdependencies ranging from likes and dislikes, or disease transmission to the "old boy" network or overlapping circles of friends, have been in existence for longer than services such as Facebook or YouTube; analysis of these networks emphasizes the relationships within the network . This reference resource offers comprehensive coverage of the theory and research within the social sciences that has sprung from the analysis of such groupings, with

accompanying definitions, measures, and research. Featuring approximately 350 signed entries, along with approximately 40 media clips, organized alphabetically and offering cross-references and suggestions for further readings, this encyclopedia opens with a thematic Reader's Guide in the front that groups related entries by topics. A Chronology offers the reader historical perspective on the study of social networks. This two-volume reference work is a must-have resource for libraries serving researchers interested in the various fields related to social networks.

Structured Decision Making - David R. Smith 2020-05-12
Smith, Jennifer A. Szymanski, Terry Walshe, Nicolas Zuël

Collaborative Strategies for Sustainable Cities - Eric S. Zeemering 2014-05-09
Baltimore, like many other cities around the globe, is redesigning local government policy and programs in order to become a more sustainable city. Sustainability, as a concept guiding public action, encourages city officials to integrate policy and programs addressing the economic, environmental, and social health of the community. City governments, including Baltimore, have adopted plans to integrate this new priority into local policy and program management. Reorienting city policy and programs to address an emergent concern like sustainability requires collaboration between city government and various actors and organizations in the community. Collaborative Strategies for Sustainable Cities examines how cities define sustainability and form policy implementation networks to integrate sustainability into city programs. Using the city of Baltimore to describe and analyze the involvement of the participants in local sustainability efforts in rich detail, Eric S. Zeemering argues that when we think about the sustainable city, the city government is not the best unit of analysis for our investigations or

policy planning. Instead, policy networks within cities carve out slices of a sustainability agenda, define sustainability in their own ways, and form implementation networks with city government officials, neighborhood and community organizations, funders, and state and federal agencies in order to achieve specific goals. When cities begin to integrate sustainability into policies and programs, surveying and understanding competing definitions of sustainability within the community may be central to their success. The book's rich array of data, including qualitative data from elite interviews and public documents, Q-methodology and social network analysis will make for an engaging read to scholars of political science or public affairs as well as the interested citizen or policy advocate.

European Citizenship in Perspective - Jan van der Harst, 2018-06-29
Civil, economic, political and social rights are at the centre of the concept of European citizenship. In this volume, the focus is on the political-constitutional dimension of European citizenship, which is discussed from the perspective of several disciplines – history, constitutional law and political science. It provides a multi-faceted account of the evolution of European citizenship and its institutionalization, explaining why certain rights came into existence at a certain time and focussing on several key actors involved, such as the European Court of Justice.

Sustainable Solid Waste Management - Ni-Bin Chang 2015-02-18
This book presents the application of system analysis techniques with case studies to help readers learn how the techniques can be applied, how the problems are solved, and which sustainable management strategies can be reached.

Struggling With Development - Lynn Kwiatkowski 2019-05-20
Struggling with Development is a study of the

complex relationships among international development, hunger, and gender in the context of political violence in the Philippines. This ethnography demonstrates that gender-specific international development, which has among its main goals the alleviation of hunger in women and children and the raising

The Palgrave Handbook of Political Elites -
Heinrich Best 2017-11-08
This handbook presents a comprehensive view of the current theory and research surrounding political elites, which is now a pivotal subject for academic study and public discourse. In 40 chapters by leading scholars, it displays the field's richness and diversity. The handbook is organized in six sections, each introduced by a co-editor, focusing on theories about political elites, methods for studying them, their main structural and behavioral patterns worldwide, the differentiation and integration of political elite sectors, elite attributes and resources, and the dilemmas of political elites in this century.

Forty years since Robert Putnam's landmark Comparative Study of Political Elites, this handbook is an indispensable resource for scholars and students engaged in the study of this vibrant field.
