[Housing for Degrowth](#) - Anitra Nelson 2018-08-13

'Degrowth', a type of 'postgrowth', is becoming a strong political, practical and cultural movement for downscaling and transforming societies beyond capitalist growth and non-capitalist productivism to achieve global sustainability and satisfy everyone's basic needs. This groundbreaking collection on housing for degrowth addresses key challenges of unaffordable, unsustainable and anti-social housing today, including going beyond struggles for a 'right to the city' to a 'right to metabolism', advocating refurbishment versus demolition, and revealing controversies within the degrowth movement on urbanisation, decentralisation and open localism. International case studies show how housing for degrowth is based on sufficiency and conviviality, living a 'one planet lifestyle' with a common ecological footprint. This book explores environmental, cultural and economic housing and planning issues from interdisciplinary perspectives such as urbanism, ecological economics, environmental justice, housing studies and policy, planning studies and policy, sustainability studies, political ecology, social change and degrowth. It will appeal to students and scholars across a wide

range of disciplines.

The Urbanism of Metabolism - Raffaele Pernice 2022

"This edited book explores and promotes reflection on how the lessons of Metabolism experience can inform current debate on city making and future practice in architectural design and urban planning. Sixty years on from when the Metabolist manifesto was published, the authors' original contributions highlight the persistent links between present and past that can help to re-imagine new urban futures as well as the design of innovative intra-urban relationships and spaces. The essays are written by experienced scholars and renowned academics from Japan, Australia, Europe, S. Korea and the US and expose Metabolism's special merits in promoting new urban models and evaluate the current legacy of its architectural projects and urban design lessons. They offer a critical, intellectual, and up-to-date account of the Metabolism projects and ideas in the context of current evolution of architectural and urbanism discourse in a global context"--

The Image of the City - Kevin Lynch 1964-06-15

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect,

the planner, and certainly the city dweller will all want to read this book.

Changing Places - John MacDonald 2019-10-22

The design of every aspect of the urban landscape—from streets and sidewalks to green spaces, mass transit, and housing—fundamentally influences the health and safety of the communities who live there. It can affect people's stress levels and determine whether they walk or drive, the quality of the air they breathe, and how free they are from crime. *Changing Places* provides a compelling look at the new science and art of urban planning, showing how scientists, planners, and citizens can work together to reshape city life in measurably positive ways.

Urban Food Planning - Rositsa T. Ilieva 2016-09-13

This highly original work examines the rise of the urban food planning movement in the Global North and provides insights into the new relationship between cities and food which has started developing over the past decade. It sheds light on cities as new spaces for food system innovation and on food as a tool for sustainable urban development. Drawing insights from the literature on socio-technical transitions, the book presents examples of pioneering urban food planning endeavours from North America and Western Europe (especially the Netherlands and the UK). These are integrated into a single mosaic helping to uncover the conceptual, analytical, design, and organizational innovations emerging at the interface of food and urban policy and planning. The author shows how promising "seeds of transition" to a shared urban food planning agenda are in the making, though the urban food planning niche as a whole still lacks the necessary maturity to lastingly influence mainstream planning practices and the dominant agri-food system regime. Some of the strategic levers to cope with the current instability and limitations of urban food planning and effectively transition it from a marginal novelty

to a normalized domain of policy, research, and practice are systematically examined to this end. The conclusions and recommendations put forward have major implications for scholars, activists, and public officials seeking to radically transform the co-evolution of food, cities, and the environment.

The Death and Life of Great American Cities - Jane Jacobs
2016-07-20

Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the bitingly satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous,

sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

Tomorrow's Cities, Tomorrow's Suburbs - William Lucy 2020-06-16

Cities ruled the first half of the 20th century; the second half belonged to the suburbs. Will cities become dominant again? Can the recent decline of many suburbs be slowed? This book predicts a surprising outcome in the decades-long tug-of-war between urban hubs and suburban outposts. The authors document signs of resurgence in cities and interpret omens of decline in many suburbs. They offer an extensive analysis of the 2000 census, with insights into the influence of income disparities, housing age and size, racial segregation, immigration, and poverty. They also examine popular perceptions-and misperceptions-about safety and danger in cities, suburbs, and exurbs that affect settlement patterns. This book offers evidence that the decline of cities can continue to be reversed, tempered by a warning of a mid-life crisis looming in the suburbs. It also offers practical policies for local action, steps that planners, elected officials, and citizens can take to create an environment in which both cities and suburbs can thrive.

The City of Tomorrow - Carlo Ratti 2016-06-28

Since cities emerged ten thousand years ago, they have become one of the most impressive artifacts of humanity. But their evolution has been anything but linear—cities have gone through moments of radical change, turning points that redefine their very essence. In this book, a renowned architect and urban planner who studies the intersection of cities and technology argues that we are in such a moment. The authors explain some of the forces behind urban change and offer new visions of the many possibilities for tomorrow's city. Pervasive digital systems that layer our cities are transforming urban life. The authors provide a front-row seat to this change. Their work at the MIT Senseable City Laboratory allows experimentation and implementation of a variety of urban initiatives and concepts, from assistive condition-monitoring bicycles to trash with embedded tracking sensors, from mobility to energy, from participation to production. They call for a new approach to envisioning cities: futurecraft, a symbiotic development of urban ideas by designers and the public. With such participation, we can collectively

imagine, examine, choose, and shape the most desirable future of our cities.

Where We Want to Live - Ryan Gravel 2016-03-15

Winner, Phillip D. Reed Award for Outstanding Writing on the Southern Environment **A Planetizen Top Planning Book for 2017** After decades of sprawl, many American city and suburban residents struggle with issues related to traffic (and its accompanying challenges for our health and productivity), divided neighborhoods, and a non-walkable life. Urban designer Ryan Gravel makes a case for how we can change this. Cities have the capacity to create a healthier, more satisfying way of life by remodeling and augmenting their infrastructure in ways that connect neighborhoods and communities. Gravel came up with a way to do just that in his hometown with the Atlanta Beltline project. It connects 40 diverse Atlanta neighborhoods to city schools, shopping districts, and public parks, and has already seen a huge payoff in real estate development and local business revenue. Similar projects are in the works around the country, from the Los Angeles River Revitalization and the Buffalo Bayou in Houston to the Midtown Greenway in Minneapolis and the Underline in Miami. In *Where We Want to Live*, Gravel presents an exciting blueprint for revitalizing cities to make them places where we truly want to live.

Smart Cities of Today and Tomorrow - Joseph N. Pelton 2018-08-28

Hackers, cyber-criminals, Dark Web users, and techno-terrorists beware! This book should make you think twice about attempting to do your dirty work in the smart cities of tomorrow. Scores of cities around the world have begun planning what are known as "smart cities." These new or revamped urban areas use the latest technology to make the lives of residents easier and more enjoyable. They will have automated infrastructures such as the Internet of Things, "the Cloud," automated industrial controls, electronic money, mobile and communication satellite systems, wireless texting and networking. With all of these benefits come new forms of danger, and so these cities will need many safeguards to prevent cyber criminals from wreaking havoc. This book explains the advantages of smart cities and how to design and operate one. Based on

the practical experience of the authors in projects in the U.S. and overseas in Dubai, Malaysia, Brazil and India, it tells how such a city is planned and analyzes vital security concerns that must be addressed along the way. Most of us will eventually live in smart cities. What are the advantages and the latest design strategies for such ventures? What are the potential drawbacks? How will they change the lives of everyday citizens? This book offers a preview of our future and how you can help prepare yourself for the changes to come.

Precisions on the Present State of Architecture and City Planning - Le Corbusier 2015-03

Coinciding with the 50th anniversary of his death (August 27, 2015), one of Le Corbusier's most significant books becomes available again in English. We are doing a reprint of MIT Press's first edition of 1991, which again is based on the original French version of 1930, with an introduction added by the author in 1960. While the MIT Press version had black-and-white illustrations throughout, Park Books' new edition features some of Le Corbusier's drawings in color as they were in the earlier French editions. A new essay by British scholar Tim Benton, written for this new edition, contextualizes the book within Le Corbusier's oeuvre and comments on its lasting significance. An also new appendix explains specialist terms and provides background information on persons and historic events no longer necessarily known to a younger generation of architects. The *Precisions*, as the book is known commonly, emerged from a spontaneous and exuberant series of 10 lectures Le Corbusier gave in Buenos Aires during the fall of 1929. As he spoke, Le Corbusier improvised drawings on large sheets of paper with crayons. While similar drawings appear in other works, here all the lectures and images appear in their original context as Le Corbusier assembled them more than 80 years ago. The texts reflect a new maturity in Le Corbusier's thinking and an extreme confidence in the development of his ideas. The drawings and lectures are unique in their eloquent and concise summary of his philosophy of architecture and urban design, stating the principles that informed his work from the 1920s on. They contain some of his most compelling aphorisms, both verbal and visual,

covering technique as the basis of architecture, the human scale in design, furniture, the private house, apartments and office buildings, the city, the League of Nations competition, teaching architecture, and a splendid analysis of the transformation of his own work in houses from La Roche-Jeanneret to the Villa Savoye. [Based on MIT Press's copy for their 1991 edition]

Cities for People - Jan Gehl 2013-03-05

For more than forty years Jan Gehl has helped to transform urban environments around the world based on his research into the ways people actually use—or could use—the spaces where they live and work. In this revolutionary book, Gehl presents his latest work creating (or recreating) cityscapes on a human scale. He clearly explains the methods and tools he uses to reconfigure unworkable cityscapes into the landscapes he believes they should be: cities for people. Taking into account changing demographics and changing lifestyles, Gehl emphasizes four human issues that he sees as essential to successful city planning. He explains how to develop cities that are Lively, Safe, Sustainable, and Healthy. Focusing on these issues leads Gehl to think of even the largest city on a very small scale. For Gehl, the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train. This small-scale view, he argues, is too frequently neglected in contemporary projects. In a final chapter, Gehl makes a plea for city planning on a human scale in the fast-growing cities of developing countries. A “Toolbox,” presenting key principles, overviews of methods, and keyword lists, concludes the book. The book is extensively illustrated with over 700 photos and drawings of examples from Gehl’s work around the globe.

Retrofitting Cities for Tomorrow's World - Malcolm Eames 2017-09-06

A groundbreaking exploration of the most promising new ideas for creating the sustainable cities of tomorrow The culmination of a four-year collaborative research project undertaken by leading UK universities, in partnership with city authorities, prominent architecture firms, and major international consultants, *Retrofitting Cities* for

Tomorrow's World explores the theoretical and practical aspects of the transition towards sustainability in the built environment that will occur in the years ahead. The emphasis throughout is on emerging systems innovations and bold new ways of imagining and re-imagining urban retrofitting, set within the context of 'futures-based' thinking. The concept of urban retrofitting has gained prominence within both the research and policy arenas in recent years. While cities are often viewed as a source of environmental stress and resource depletion they are also hubs of learning and innovation offering enormous potential for scaling up technological responses. But city-level action will require a major shift in thinking and a scaling up of positive responses to climate change and the associated threats of environmental and social degradation. Clearly the time has come for a more coordinated, planned, and strategic approach that will allow cities to transition to a sustainable future. This book summarizes many of the best new ideas currently in play on how to achieve those goals. Reviews the most promising ideas for how to approach planning and coordinating a more sustainable urban future by 2050 through retrofitting existing structures Explores how cities need to govern for urban retrofit and how future urban transitions and pathways can be managed, modeled and navigated Offers inter-disciplinary insights from international contributors from both the academic and professional spheres Develops a rigorous conceptual framework for analyzing existing challenges and fostering innovative ways of addressing those challenges Retrofitting Cities for Tomorrow's World is must-reading for academic researchers, including postgraduates insustainability, urban planning, environmental studies, economics, among other fields. It is also an important source of fresh ideas and inspiration for town planners, developers, policy advisors, and consultants working within the field of sustainability, energy, and the urban environment.

New Urbanism and American Planning - Emily Talen 2005-11-16
New Urbanism and American Planning presents the history of American planners' quest for good cities and shows how New Urbanism is a culmination of ideas that have been evolving since the nineteenth century. In her survey of the last hundred or so years of urbanist ideals, Emily Talen identifies four approaches to city-making, which she terms 'cultures': incrementalism, plan-making, planned communities, and regionalism. She shows how these cultures connect, overlap, and conflict and how most of the ideas about building better settlements are recurrent. In the first part of the book Talen sets her theoretical framework and in the second part provides detailed analysis of her four 'cultures'. She concludes with an assessment of the successes and failures of the four cultures and the need to integrate these ideas as a means to promoting good urbanism in America.

City as Landscape - Tom Turner 2014-04-04

In twenty essays, this book covers aspects of planning, architecture, urban design, landscape architecture, park and garden design. Their approach, described as post-postmodern, is a challenge to the 'anything goes' eclecticism of the merely postmodern.

How to Build a Global City - Michele Acuto 2022-01-15

In *How to Build a Global City*, Michele Acuto considers the rise of a new generation of so-called global cities—Singapore, Sydney, and Dubai—and the power that this concept had in their ascent, in order to analyze the general relationship between global city theory and its urban public policy practice. The global city is often invoked in theory and practice as an ideal model of development and a logic of internationalization for cities the world over. But the global city also creates deep social polarization and challenges how much local planning can achieve in a world economy. Presenting a unique elite ethnography in Singapore, Sydney, and Dubai, Acuto discusses the global urban discourses,

aspirations, and strategies vital to the planning and management of such metropolitan growth. The global city, he shows, is not one single idea, but a complex of ways to imagine a place to be global and aspirations to make it so, often deeply steeped in politics. His resulting book is a call to reconcile proponents and critics of the global city toward a more explicit engagement with the politics of this global urban imagination.

Imagining the Future City - Sarah Bell 2013-11-18

London is one of the world's leading cities. It is home to an extraordinary concentration and diversity of people, industries, politics, religions and ideas, and plays an important role in our highly globalised and tightly networked modern world. What does the future hold for London?

Investigating any aspect of the city's future reveals a complex picture of interrelations and dependencies. The London 2062 Programme from University College London brings a new, cross-disciplinary and highly collaborative approach to investigating this complexity. The programme crosses departmental boundaries within the university, and promotes active collaboration between leading academics and those who shape London through policy and practice. This book approaches the question of London's future by considering the city in terms of Connections, Things, Power and Dreams.

The City at Eye Level - Meredith Glaser 2012

Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These "plinths" are the ground floors that negotiate between inside and outside, the public and private spheres. The City at Eye Level qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners,

building owners, property and shop managers, designers, and architects.

Walt and the Promise of Progress City - Sam Gennaway 2011

Walt Disney's vision for a city of tomorrow, EPCOT, would be a way for American corporations to show how technology, creative thinking, and hard work could change the world. He saw this project as a way to influence the public's expectations about city life, in the same way his earlier work had redefined what it meant to watch an animated film or visit an amusement park. *Walt and the Promise of Progress City* is a personal journey that explores the process through which meaningful and functional spaces have been created by Walt Disney and his artists as well as how guests understand and experience those spaces.

The Millennial City - Markus Moos 2017-08-04

Millennials have captured our imaginaries in recent years. The conventional wisdom is that this generation of young adults lives in downtown neighbourhoods near cafes, public transit and other amenities. Yet, this depiction is rarely unpacked nor problematized. Despite some commonalities, the Millennial generation is highly diverse and many face housing affordability and labour market constraints. Regardless, as the largest generation following the post-World War II baby boom, Millennials will surely leave their mark on cities. This book assesses the impact of Millennials on cities. It asks how the Millennial generation differs from previous generations in terms of their labour market experiences, housing outcomes, transportation decisions, the opportunities available to them, and the constraints they face. It also

explores the urban planning and public policy implications that arise from these generational shifts. This book offers a generational lens that faculty, students and other readers with interest in the fields of urban studies, planning, geography, economic development, demography, or sociology will find useful in interpreting contemporary U.S. and Canadian cities. It also provides guidance to planners and policymakers on how to think about Millennials in their work and make decisions that will allow all generations to thrive.

City of Tomorrow and Its Planning - Le Corbusier 1998

Essential Le Corbusier brings together in one volume the three main books in the Architectural Press Le Corbusier series: *Towards a New Architecture*; *The Decorative Art of Today* and *The City of Tomorrow*. These classic texts provide architects and students of architecture with the information they need about Le Corbusier and his works in one, complete, highly illustrated volume. *Towards a New Architecture* The only piece of architectural writing that will be classed among the "essential literature of the 20th century." In *Vers une Architecture*, published in Paris in 1923, Le Corbusier equates the pure forms of the machine with the pure forms of the Parthenon, to illustrate his view of architecture as a question of mass rather than facades, and that machines are highly architectural. First published in English in 1927, it is now the most influential architectural manifesto of modern times. *The City of Tomorrow* 'In this book there repeatedly occur statements, comments and criticisms that strike a completely contemporary note and indicate his awareness of the same environmental problems that we are occupied with today. He saw further ahead than we may think.' J.M.Richards *The Decorative Art of Today* This volume concerned with design, Le Corbusier's principal theme, is the distinction between a work of art and an object of use. He states that the latter should not attempt to usurp the role of the former. The arguments put forward, which are essential to an understanding of Le Corbusier's apparently reductivist design, are nowhere else systematically advanced. Full of wit and vitality, this essay provides essential reading for his admirers by covering important aspects of his thought at a crucial period. Brings all of the

essential Le Corbusier articles in the famous *L'Esprit Nouveau* magazines into one volume Highly illustrated, mainly with Le Corbusier's own drawings

Cities of Tomorrow - Peter Hall 1997-02-18

Cities of Tomorrow is a critical history of planning in theory and practice in the twentieth century, as well as of the social and economic problems and opportunities that gave rise to it. Trenchant, perceptive, global in coverage, this book is an unrivalled account of its crucial subject. The third edition of *Cities of Tomorrow* is comprehensively revised to take account of abundant new literature published since its original appearance, and to view the 1990s in historical perspective. This is the definitive edition, reviewing the development of the modern planning movement over the entire span of the twentieth century.

Cities in Civilization - Peter Hall 2001

Ranging over 2,500 years, *Cities in Civilization* is a tribute to the city as the birthplace of Western civilization. Drawing on the contributions of economists and geographers, of cultural, technological, and social historians, Sir Peter Hall examines twenty-one cities at their greatest moments. Hall describes the achievements of these golden ages and outlines the precise combinations of forces -- both universal and local -- that led to each city's belle époque. Hall identifies four distinct expressions of civic innovation: artistic growth, technological progress, the marriage of culture and technology, and solutions to evolving problems. Descriptions of Periclean Athens, Renaissance Florence, Elizabethan London, and nineteenth-century Vienna bring to life those seedbeds of artistic and intellectual creativity. Explorations of Manchester during the Industrial Revolution, of Henry Ford's Detroit, and of Palo Alto at the dawn of the computer age highlight centers of technological advances. Tales of the creation of Los Angeles' movie industry and the birth of the blues and rock 'n' roll in Memphis depict the marriage of culture and technology. Finally, Hall celebrates cities that have been forced to solve problems created by their very size. With Imperial Rome came the apartment block and aqueduct; nineteenth-century London introduced policing, prisons, and sewers; twentieth-

century New York developed the skyscraper; and Los Angeles became the first city without a center, a city ruled instead by the car. And in a fascinating conclusion, Hall speculates on urban creativity in the twenty-first century. This penetrating study reveals not only the lives of cities but also the lives of the people who built them and created the civilizations within them. A decade in the making, *Cities in Civilization* is the definitive account of the culture of cities.

[The Power of Culture in City Planning](#) - Tom Borrup 2020-11-30

The Power of Culture in City Planning focuses on human diversity, strengths, needs, and ways of living together in geographic communities. The book turns attention to the anthropological definition of culture, encouraging planners in both urban and cultural planning to focus on characteristics of humanity in all their variety. It calls for a paradigm shift, re-positioning city planners' "base maps" to start with a richer understanding of human cultures. Borrup argues for cultural master plans in parallel to transportation, housing, parks, and other specialized plans, while also changing the approach of city comprehensive planning to put people or "users" first rather than land "uses" as does the dominant practice. Cultural plans as currently conceived are not sufficient to help cities keep pace with dizzying impacts of globalization, immigration, and rapidly changing cultural interests. Cultural planners

need to up their game, and enriching their own and city planners' cultural competencies is only one step. Both planning practices have much to learn from one another and already overlap in more ways than most recognize. This book highlights some of the strengths of the lesser-known practice of cultural planning to help forge greater understanding and collaboration between the two practices, empowering city planners with new tools to bring about more equitable communities. This will be an important resource for students, teachers, and practitioners of city and cultural planning, as well as municipal policymakers of all stripes.
