Open Schools/Healthy Schools - Wayne K. Hoy 1991-02-27

Is your school a good, healthy place to work? Does the organizational climate contribute to academic achievement? Do you know how to evaluate the factors that can directly affect the effectiveness of education? *Open Schools//Healthy Schools* offers the basis for answering these and other questions. The authors demonstrate the significant relationship that exists between school health and academic performance. They then present the measures, developed over many years of careful research, that can best test the organizational climate of any school.

**Water Insecurity and Sanitation in Asia** - 2019

**Quality Middle Schools** - Wayne K. Hoy 1998

Building on 20 years of careful research and real-world testing, the authors show administrators how to assess their schools' health. The goal is to improve middle schools by making sure the "culture" is right for all groups - students, teachers, staff. The authors call their measurement tools the Organizational Climate Description Questionnaire Revised for Middle Schools (OCDQ-RM), for tapping the openness of a school's professional interactions, and the Organizational Health Inventory for Middle Schools (OHI-M), for capturing the health of interpersonal relationships in schools. The OCDQ-RM (openness) questionnaire and the OHI-M (health) inventory are included in this book - ready to copy and administer. These measurements are user-friendly and easy to interpret; scoring directions are clearly explained. School leaders, especially superintendents and principals, can use these hands-on tools to understand what's going on in their schools and then make changes as necessary. Actual case studies show how using the questionnaires can help make every middle school a high-quality and positive learning environment.

'A sensational book' *India Today* A shocking exposé of the event that changed Indian politics forever P.V. Narasimha Rao was the prime minister of India when, on 6 December 1992, thousands of kar sevaks stormed into the site of the Babri Masjid in Ayodhya. The nation watched in horror as the centuries-old mosque was razed to the ground, in the presence of paramilitary forces and senior political leaders, marking a turning point in post-Independence Indian history. Many hold Rao responsible for not preventing the demolition, while others accuse him of being a co-conspirator. In this tell-all account, Rao reveals what really transpired in the run-up to that fateful day. Drawing on the Supreme Court order, parliamentary proceedings, eyewitness reports and his own insights, he presents a comprehensive view of the machinations that led to the demolition of the Babri Masjid. Nearly three decades after the event, Ayodhya: 6 December 1992 remains a valuable resource to understanding the political manoeuvres behind the Ram Mandir issue and the dangers of exploiting religious sentiments for narrow electoral gains.

**Enriched Methane** - Marcello De Falco 2015-10-28

This book brings together recent research from across the world on enriched methane, and examines the production, distribution and use of this resource in internal combustion engines and gas turbines. It aims to provide readers with an extensive account of potential technological breakthroughs which have the capacity to revolutionize energy systems. Enriched methane, a gas mixture composed by methane and hydrogen (10-30%vol), constitutes the first realistic step towards the application of hydrogen as an energy vector. It provides strong benefits in terms of emissions reduction, that is -11% of CO<sub>2</sub>, eq emission with the combustion of a 30%vol H<sub>2</sub> mixture, if hydrogen is produced from renewable energy sources. Enriched methane offers the following advantages: • it can be produced at competitive costs; • it can be distributed by means of the medium pressure natural gas grid; • it can be stored in traditional natural gas storage systems; • it can feed natural gas internal combustion engine, improving conversion efficiency.

This book is intended for academics in chemical engineering and energy production, distribution and storage. It is also intended for energy producers, engineering companies and R&D organizations.

**Hydroprocessing of Heavy Oils and Residua** - Jorge Ancheyta 2007-05-08

Many oil refineries employ hydroprocessing for removing sulfur and other impurities from petroleum feedstocks. Capable of handling heavier feedstocks than other refining techniques, hydroprocessing enables refineries to produce higher quality products from unconventional — and formerly wasted — sources. Hydroprocessing of Heavy Oils and Residua illustrates how to obtain maximum yields of high-value products from heavy oils and residue using hydroprocessing technologies. While most resources on hydroprocessing concentrate on gas oil and lower boiling products, this book details the chemistry involved and the process modifications required for the hydroprocessing of heavy crude oils and residua. Emphasizing the use of effective catalysts to ensure cleaner and more efficient industrial fuel processes, the book presents key principles of heterogeneous catalyst preparation, catalyst loading, and reactor systems. It explains how to evaluate and account for catalysts, reactor type, process variables, feedstock type, and feedstock composition in the design of hydroprocessing operations. The text concludes with examples of commercial processes and discusses methods of hydrogen production. To meet the growing demand for transportation fuels and fuel oil, modern oil refineries must find ways to produce high quality fuel products from increasingly heavy feedstocks. Hydroprocessing of Heavy Oils and Residua contains the fundamental concepts, technologies, and process modifications refineries need to adapt current hydroprocessing technologies for processing heavier feedstocks.

**Decentralised Sanitation and Reuse** - Piet Lens 2001-03-01

Adopting a multi-disciplinary approach, Decentralised Sanitation and Reuse places public sanitation in a global context and provides a definitive discussion of current state-of-the-art sanitation technologies. A whole range of available sustainable technologies, both low and high-tech, to treat concentrated (black water) and diluted (grey water) streams are addressed in detail from the fundamental scientific and engineering points of view. Sociological, economic and, particularly, environmental and public health aspects are essential issues within this book. The necessity of new infrastructure implementation and the resulting challenges for a good number of economic branches are illustrated with examples from architecture and town planning.
