Concepts of Biology - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Middle School Life Science - Judy Capra 1999-08-23

Middle School Life Science Teacher's Guide is easy to use. The new design features tabbed, loose sheets which come in a stand-up box that fits neatly on a bookshelf. It is divided into units and chapters so that you may use only what you need. Instead of always transporting a large book or binder or box, you may take only the pages you need and place them in a separate binder or folder. Teachers can also share materials. While one is teaching a particular chapter, another may use the same resource material to teach a different chapter. It's simple; it's convenient.

Digestive System & Metabolism - Dr. Tommy Mitchell 2018-08-15

The fourth volume of the Wonders of the Human Body series dives deep into why our bodies need energy and how we get it. As with all our explorations into the complexity of the human body, when you see the incredible design of the digestive system, you ultimately have to ask yourself, "Can this all possibly be an accident? Something that happened by chance?" The answer is a resounding, "No!" We are not the product of evolution. We are not animals. We are a special creation. In *Digestive System & Metabolism*, you will learn about: The digestive system—including the teeth and tongue, the mouth and esophagus, the stomach and intestines, the liver, the gallbladder, and the pancreas Our metabolism—a complex system created by God to transform food into fuel for our energy God our Designer thought of everything, even the problems that would occur in a sin-cursed world. We are indeed wonderfully made. Prepare to be amazed!

Introduction to Anatomy & Physiology Teacher Guide - Dr Tommy Mitchell 2016-07-25

Volume One, The Musculoskeletal System, opens with the building blocks of your body—the cells. Your body is built from many kinds of cells and tissues, and you will learn how they work. Even the bones and muscles that give you strength and speed depend on many types of cells. This book will: Show you the ins and outs of the bones in your skeleton and how they function Give detail as to how your marvelous muscles move you Provide a detailed glossary in the back for quick reference! Throughout the book you will learn things to do to keep your body healthy. But in a fallen, cursed world things are bound to go wrong. We will look at what happens when disease or injury affects bones and muscles. Volume Two, Cardiovascular and

Respiratory Systems. From the level of the cell to the organs themselves, we will examine these systems in depth. Here you will learn: The incredible design of the human heart and how it is really "two pumps in one!" How blood moves through an incredible network of arteries and veins What "blood pressure" is and the marvelous systems that help regulate it How the respiratory system allows us to get the "bad air out" and the "good air in" Along the way, we will see what happens when things go wrong. We will also suggest things to do to keep the heart and lungs healthy. Although the world insists that our bodies are merely the result of time and chance, as you examine the human body closely, you will see that it cannot be an accident. It can only be the product of a Master Designer.

Advanced Pre-Med Studies (Teacher Guide) - Gary Parker 2016-09-06

The vital resource for grading all assignments from the Advanced Pre-Med Studies course, which includes: The fascinating history of medicine, providing students with a healthy dose of facts, mini-biographies, and vintage illustrations Insight into how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ. OVERVIEW: From surgery to vaccines, man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone, and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. The evolutionary worldview can be found filtered through every topic at every age level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic course helps young people not only learn science from a biblical perspective, but also helps them know how to defend their faith in the process. FEATURES: The calendar provides lesson planning with clear objectives, and the worksheets and quizzes are all based on the materials provided for the course.

The book provides an overview on how the gut microbiome contributes to human health. The readers will get profound knowledge on the connection between intestinal microbiota and immune defense systems. The tools of choice to study the ecology of these highly-specialized microorganism communities such as high-throughput sequencing and metagenomic mining will be presented. In addition the most common diseases associated to the composition of the gut flora are discussed in detail. The book will address researchers, clinicians and advanced students working in biomedicine, microbiology and immunology.

Circulatory, Digestive & Reproductive Systems: From Stomach to Fuel Gr. 5-8 - Susan Lang 2015-09-01

**This is the chapter slice "The Digestive System - From Stomach to Fuel" from the full lesson plan

"Circulatory, Digestive & Reproductive Systems"** How can you tell the difference between an artery and a vein? Our resource tells you how! Learn the major organs of four body systems and how they work to keep us alive and healthy. We begin with blood, blood vessels and the heart. Next, we follow the path food takes from the mouth to the large intestine, and find out how food is turned into fuel. Then it's on to how the liver, lungs and skin all help rid our body of toxins. We look inside the kidneys and intestines, and finish with how a tiny sperm and egg cell can grow into a baby. Reading passages, student activities, test prep, and color mini posters all included. All of our content is aligned to your State Standards and are written to

Human Body Big Book Gr. 5-8 - Susan Lang 2007-09-01

Take your students through a fascinating journey of the Human Body with our 3-book BUNDLE. Start your journey with Cells, Skeletal & Muscular Systems. Build your own cell by sculpting the different parts. Invent your own alien skeleton using the different bones found in the human body. Next, visit your Senses, Nervous & Respiratory Systems. Learn how the brain interprets things we see with our eyes. Conduct an experiment to see just how much air your lungs can hold. Finally, end your journey with the Circulatory, Digestive & Reproductive Systems. Examine your own heartbeat as you learn how to take your pulse. Build a model of a kidney to see it working in action. Each concept is paired with hands-on activities and experiments. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional crossword, word search, comprehension quiz and answer key are also included.

Cells, Skeletal & Muscular Systems: What Are Organs & Organ Systems? Gr. 5-8 - Susan Lang 2015-09-01

This is the chapter slice "What Are Organs & Organ Systems?" from the full lesson plan "Cells, Skeletal & Muscular Systems" What do cells, bones and muscles have in common? They are all part of the human body, of course! Our resource takes you through a fascinating study of the human body with current information written for remedial students in grades 5 to 8. We warm up with a look at the structures and functions of cells, including specialized cells. Next, we examine how cells make up tissues, organs and organ systems. Then the eight major systems of the body are introduced, including the circulatory, respiratory, nervous, digestive, excretory and reproductive systems. Then on to an in-depth study of both the muscular and skeletal systems. Reading passages, activities for before and after reading, hands-on activities, test prep, and color mini posters are all included.
