Step-by-Step Lighting for Outdoor Portrait Photography - Jeff Smith 2014-04-15

There are many aspects to professional photography: composition, camera angles, exposure, color balance, posing, and lighting— just to name a few. However, while each of these aspects of photography is important in the creation of a professional portrait, lighting presents a special challenge that is part art and part science. When the two come together effectively, the results are stunning; when any one aspect of the recipe falls short, the result is a poor exposure or a downright

unflattering look. On the artistic side of the scale, lighting is one of the primary tools for setting the mood of the portrait. It can communicate a sense of bright, airy ease or sharp, dramatic tension—or anything in between. Determining what look is right for the client (and for their intended use of the resulting portraits) is a key decision. From there, the photographer can begin to use light to sculpt the subject's features, minimizing problem areas or accentuating the subject's best features through the selection of light modifiers and the positioning of the lights themselves. Moving to the technical side, outdoor lighting present particular challenges—but also some significant advantages. Outdoors, photographers shoot at least partially with natural light. While this is (most of the day) an abundant light source, it is largely out of the control of the photographer. The light can change from moment to moment as clouds pass between the earth and sun. It also changes continually throughout the day as the sun moves across the sky. Since he can't completely control the light, the photographer must be prepared to adapt his subject's pose and position to create flattering results with the light as-is. Alternately, the photographer can "tweak" the lighting by augmenting the sunlight with flash or reflectors—or even softening it, using scrim or other diffusers. (Of course, this leaves another major concern: the background. Even if the light on the subject can be perfected, rarely can the photographer also control the light on an area as large as the background—making it a major concern in the process of posing and lighting.) So, given all this, why would any photographer choose to make portraits outside? One advantage is that the lighting and scenes are free—making outdoor photography a great starting point for those entering the field. Even established studios, however, have found that clients simply like the natural, timeless look of outdoor portraits. This makes them strong sellers. Additionally, most portrait subjects are more at ease in natural light than when seated in front of bright, noisy studio-flash units—and relaxed subjects translate into better expressions, and better overall portraits. In this book, Smith takes you through the process of lighting outdoor portraits from start to finish, covering both the artistic and technical aspects of achieving success. Short one- or two-

page lessons are amply illustrated to guide the reader through each phase. In many cases, before and after images—or image sequences showing variations and alternative approaches—are presented to facilitate learning. Readers are encouraged to have this book with them during practice sessions and work on replicating or refining the provided examples, creating a self-study course in the art of lighting for outdoor portrait photography.

Photograph the Face - 2014-06-10

The most essential factor in creating a successful, salable portrait is properly lighting the face. But, every face is different, and, each face type requires a different style of lighting. It is imperative that the photographer realizes this. From the subjects' complexion and facial size, to their clothing, hair color and setting, there are many aspects to consider when lighting a client. The photographer must also take into consideration what type of product the client wants: senior portrait,

bridal portrait, glamour or professional. Each one of these requires something different. Properly and efficiently addressing all of these factors will set you and your business apart from the competition. In this book, Smith focuses on teaching photographers how to conceptualize and produce portraits that will please the client. He emphasizes that he is not creating his own artistic vision, but that he is crafting what the client wants. That is not to say the results aren't artful and creative. Both of those things are very important, as Smith shows, but the main goal as a successful professional photographer is to create portraits that the subject wants to buy. Smith advises photographers to be aware of a subject's self-image when creating the portrait, being sure not to light them in a manner that is unflattering or distorted. Success in creating salable portraits relies as much on understanding people and the way our self image functions as it does understanding the proper techniques of lighting. First, Smith discusses the differences between face types and what to be aware of when setting up the lighting for each. Proper metering and placement of light source are essential to controlling your highlights, your shadowing and the transition area in between. Establishing a system for modifying your lighting setup for each subject is emphasized. The concept of Camera Sight, or visualizing the finished photo ahead of time to look for potential problem areas, is very important. As Smith admits, this skill comes with experience. Where he once had to take many test shots to pick out these issues, he is now able to see them before he shoots a single frame. This is a skill that develops over time with training and practice. The author then explains the differences between shooting in a studio and shooting on location, both indoors and outdoors. Different equipment is required for each scenario, but the equipment used for shooting outdoors can even differ depending on the time of day. While the most ideal natural light occurs just after sunrise or just before sunset, most customers do not want to have their portraits taken at 5am or late in the day. So, the photographer needs to be prepared to shoot in the harsh midday sun. In addition to lighting the face, the photographer must find usable light to illuminate the background properly. Smith details the lighting system he uses for

outdoor portraiture and presents it in the context of his shooting experiences. While studio shoots provide greater levels of comfort and consistency compared to a location shoot, there are still many things required to get that perfect shot. Properly applying fill, accent light and shadowing are just as important in the studio as they are on location. Understanding the concepts of traditional lighting allows the photographer to consistently create studio portraits that will please any customer. The most important part of the face to light properly is the eyes. Smith explains in detail what factors a successful photographer must consider to get the final portrait every client wants. Whether it is a difference in the size of the client's eyes or ears, asymmetrical lips, or a crooked nose, there are ways to light these to correct the differences. Using artistry and creative vision to adapt from the comfort of studio shoots to the complicated and diverse demands of location shoots, Smith provides the reader with the tools to capture what the client wants every time.

[Get Up Your Bus Is Here \(Paperback\)](#) - Stephen A. Dantzig 2012

"One day I was walking to the bus and caught an icy patch and wound up face down in the snow. My mother stood true to Dr. Shelsky's word and with tears in her eyes told me to 'Get up. Your bus is here.' She would have obviously helped me if I was hurt, but the early message to me was also clear; I was going to learn to fend for myself..." Dr. Stephen Dantzig's tenth book is by far his most personal to date. "Get Up, Your Bus Is Here. Living MY Life With Cerebral Palsy: Trials, Tribulations and Triumphs" chronicles his life growing up with Cerebral Palsy and details his successes as well as his struggles. He candidly talks about additional challenges brought on by Kienbock's Disease and the two wrist fusion surgeries that followed. Battles with obsessive-compulsive tendencies are also brought to the forefront. Dantzig talks about his parents and their influence on his independence, modifications needed in his early days in elementary school and follows his educational career through earning his doctorate in psychology from Rutgers University. He details his development and life lessons learned as a school psychologist working with severely disabled children, professional photographer, and author.

He talks about living with a ghost in New York, life in Los Angeles, and his big move to Hawaii. Dantzig relates his experiences on skis, the softball field, a surfboard, and under water with SCUBA gear. His stories are often poignant with subtle humor. His struggles are discussed in a matter-of-fact way that denounces self-pity while his triumphs are talked about with humility. Dantzig provides resources and references for anyone looking for more information on the many topics discussed. Part of the proceeds from this book will go to local United Cerebral Palsy Association chapters. Identifying beautiful light (or creating/modifying the light) takes experience, observation, and a knowledge the fundamentals of lighting. Learning how to visualize the intended image in your mind's eye and translate that vision onto a two-dimensional plane is, as this book will show, far more important than what device you actually use to record that image. If you have ever looked at an amazing scene or subject but been disappointed by your photos of it--this is the book for you! Through examples and exercises, the author challenges you creatively, starting with the very basics of lighting and building a knowledge base that you can apply to your growth as a photographer at any stage, and with any camera.
