Bidong Island - Ong Meng Chuan 2022

Bidong Island is a small island located in the South China Sea, and is about 14 km from mainland Peninsular Malaysia.

The island and the Bidong archipelago boast of its richness in diversity of both terrestrial and marine organisms and its undeniably pristine and thriving ecosystem. In 1975-1990, Bidong Island was formerly a UNHCR refugee camp for a quarter of a million Vietnamese "Boat people" escaping the Vietnam War, and still holds great significance to many of its descendants. Due to its historical significance, the Terengganu State government plans to develop Bidong Island as a heritage tourism site and a new scuba diving destination. This book highlights the uniqueness of Bidong Island and its archipelago, paying particular attention to the

biological aspect (which includes marine and terrestrial organisms) and the pollution status surrounding the island. These mainly focus on organisms of the open water and benthic ecosystems such as plankton, fishes, corals reef communities, crustaceans and foraminifera. In addition, we discuss terrene related topics, which includes tree diversity, lichens and also herpetofauna surrounding the Bidong Island. Indisputably an important topic, we also address the pollution status surrounding Bidong Island, with emphasis on heavy metals and its impact. Readers interested in the areas of environmental sciences should find this book appealing. This book can also be used by students and researchers when discussing about tropical environments on island ecosystems. We do hope that stakeholders that would partake in future interest of Bidong Island (particularly in tourism) are equally aware of the current health status of the island and would engage in conserving and sustaining the

diversity and heritage of the archipelago for the benefit of the community. .

*Historical Dictionary of
Malaysia* - Ooi Keat Gin
2017-12-18
Malaysia is one of the most
intriguing countries in Asia in
many respects. It consists of
several distinct areas, not only
geographically but ethnically
as well; along with Malays and
related groups, the country has
a very large Indian and
Chinese population. The
spoken languages obviously
vary at home, although Bahasa
Malaysia is the official
language and nearly everyone
speaks English. There is also a
mixture of religions, with Islam
predominating among the
Malays and others, Hinduism
and Sikhism among the
Indians, mainly Daoism and
Confucianism among the
Chinese, but also some

Christians as well as older indigenous beliefs in certain places. This second edition of Historical Dictionary of Malaysia contains a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 500 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent resource for students, researchers, and anyone wanting to know more about Malaysia.

The Birds of the Iberian Peninsula - Eduardo de Juana
2015-02-26

The Iberian Peninsula is one of Europe's most ornithologically varied regions offering a host of regional specialities. It

includes famous birding hotspots such as the Coto Donaña wetlands, mountainous areas such as the Picos de Europa and the Pyrenees, the Mediterranean cork and holm oak forests of the southwest, the migration crossroads of the Strait of Gibraltar and the steppe-like plains of Extremadura and Alentejo. Large numbers of birders from around Europe visit the region to see this wealth of winged wildlife, but to date there has been no comprehensive regional avifauna in English. Birds of the Iberian Peninsula is a national avifauna that fills this gap in the ornithological literature. Full-colour throughout, the book begins with authoritative introductory chapters covering subjects such as geography, climate, habitats, the history of Iberian ornithology and the composition of the avifauna. The species accounts then cover every species recorded in mainland Spain, the Balearic Islands, Portugal, Gibraltar and Andorra, including the many vagrants. For each species

there is detailed treatment of distribution - with maps of breeding and wintering ranges - habitat selection, population trends, historical and current status, migration and conservation.

[Guide to the Birds of China](#) - John MacKinnon 2022-01-21
China covers about 7% of the earth's land surface and encompasses a hugely diverse range of habitats. As a result, it boasts a rich and diverse avifauna, including some of the most spectacular and fascinating birds to be found anywhere in the world. Building on the enormous popularity and reputation of the original A Field Guide to the Birds of China (2000), John MacKinnon's fully updated and refreshed work remains a truly comprehensive, taxonomically modern, fully illustrated, and authoritative field guide. 1484 bird species are richly illustrated in 164 annotated colour plates, which are closely integrated with up-to-date colour distribution maps, QR codes providing easy access to birdcalls, IUCN Red List status

indicators and new, concise descriptions. These descriptions feature key observations as well as conveying crucial changes to species distributions resulting from climate change and landscape transformation. Guide to the Birds of China will

appeal to an international and growing audience of professional and amateur ornithologists and birding enthusiasts, academic researchers and students, wildlife photographers, and conservationists.
