2012 - Peter Hargitai 2010-11-24

AMAZING PROPHECY HIDDEN IN NOVEL! By the author who foretold 911 and the Twin Towers meltdown! In all that is banal and bathetic lurks the heroic as in the story of Attila Nagy whose mad forays into time sound the horn of prophecy. The visionary path its author Peter Hargitai cuts into time intersects with Nostradamus' famous Epistle and with contemporary history: "The great empire of the Antichrist will begin where Attila and Xerxes descended." --Nostradamus (from the Epistle to Henry II) Praise for Editor's Choice Author Peter Hargitai: "This deliciously ironic, picaresque tale borders on the bizarre, but Hargitai is a language master capable of effortless shifts from reality to myth ... This genre-bending novel is a pleasure to read. Highly recommended for all fiction collections." --Library Journal Hargitai maintains a high level of tension; with arrogant abandon he plays out his tricks and his intricate cat-and-mouse game on the reader with huge success. So deft are his embroidery of metaphors and redressing of myths that we give credence to the most outrageous bluffs, mythical occurrences, pseudomagic, drug-induced psychedelic visions, inexplicable apparitions, and a bevy of layers-thick concealments ... Few can convey the madness of the New World with such absurd dexterity, and such a keen sense of irony and the grotesque. This mischievous, iconoclastic sorcerer manages to mesmerize everybody." --World Literature Today

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles - National Research Council 2015-09-28

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
