The First 20 Hours - Josh Kaufman 2013-06-13

Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list? What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes 10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In *The First 20 Hours*, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn

any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well. Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific, the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait, launch a start-up, fly an airplane, or juggle flaming chainsaws, *The First 20 Hours* will help you pick up the basics of any skill in record time . . . and have more fun along the way.

Alien Offensive - Book 2 - Marsell Morris
2016-04-19

Humankind's first contact with an intelligent extraterrestrial species was not friendly. Because their star, a dying red dwarf, would soon fail to provide life-supporting warmth, a distant alien species recognized Earth, a planet similar to their world, perfect for their needs. In preparation for the move to Earth, the highly intelligent entities implemented a cleverly devised nanobot attack in an attempt to eradicate all life on Earth. They planned to follow the attack by sending a detachment to terraform the planet and assure all life on Earth was eliminated by the time they arrived. At least that was their plan. Fortunately, they didn't recognize the resolve of the human species to survive. While enlisting the extraordinary talents of a gifted physicist, the first attack was thwarted, but the aliens were not deterred. They had no choice. It was move or perish. With the immediate threat eliminated, Earth's scientist searched for the origin of the sinister nanobots and learned they came from a planet called Gliese 581-d that was more than twenty light-years away. They began to study the giant, water-covered planet and its weak, red dwarf star. A ten year study via the Hubble Space Telescope showed little change, and then one day, scientist were shocked to see a mammoth flotilla of alien spaceships assemble near the distant planet and set out on a course that would bring them to Earth. But, because Gliese 581-d was so far away, the scientist weren't too concerned. Even if the alien ships could travel at light-speed, it was decided it would be over two decades before they arrived. Because Einstein predicted nothing other than a photon can travel at light-speed, a theory later proven with the discovery of the Higgs Field, the flotilla wasn't expected to arrive in this century unless they could construct a stable wormhole, something no one believed they could. However, as a precaution, the world leaders decided to keep a close eye on the mammoth flotilla, code named Target One, and begin working on countermeasures should Target One arrive. They assumed they will have developed more advanced technology, and would be able to repel any future attacks. Should Target One show up

in Earth's space earlier than expected, it would be a battle between the might of the greater numbered humans and their determination, against the superior technology of the lesser numbered aliens, and the outcome could not be determined. That was ten years ago, and in episode two, the surveillance continues . . .
