**The Helmholtz Legacy in Physiological Acoustics** - Erwin Hiebert 2014-06-12

This book explores the interactions between science and music in the late nineteenth- and early twentieth century. It examines and evaluates the work of Hermann von Helmholtz, Max Planck, Shohé Tanaka, and

Adriaan Fokker, leading physicists and physiologists who were committed to understanding crucial aesthetic components of the art of music, including the standardization of pitch and the implementation of various types of intonations. With a mixture of physics, physiology, and aesthetics, author Erwin Hiebert addresses throughout the book how just intonation came to intersect with the history of keyboard instruments and exert an influence on the development of Western music. He begins with the work of Hermann von Helmholtz, a leading nineteenth-century physicist and physiologist who not only made important contributions in vision, optics, electrodynamics and thermodynamics, but also helped advanced the field of music theory as well. The author traces the Helmholtzian trends of thought that become inherently more complex by reaching beyond the sciences to perform a bridge with aesthetics and the diverse ways in which the human mind interprets or is taught, in different cultures, to interpret and understand music. Next, the author explores the works of other key physicists and physiologists who were influenced by Helmholtz and added to his legacy. He examines Japanese music theory student Shohé Tanaka, who sought to design a harmonium that was not based on equal temperament but rather on just intonation. Dutch physicist Adriaan Daniel Fokker, who arranged for organs to be built based on 31-tones per octave, orchestrated concerts for these new instruments and even attempted to compose microtonal music, or music whose tonality is based on intervals smaller than the typical twelve semitones of Western music.

**Music for Silent Film** - Kendra Preston Leonard 2016-01-01

Between 1895 and 1929, more than 15,000 motion pictures were made in the United States. We call these works "silent films," but they were accompanied by an enormous body of music, including works adapted or

arranged from pre-existing works, as well as newly composed pieces for theater orchestras, organists, or pianists. While many films and pieces are lost, a considerable amount of material remains extant and available for use in research and performance. *Music for Silent Film: A Guide to North American Resources* is a unique resource on North American archives and English-language materials available in for those interested in this repertoire. Part I contains information about archives of primary source materials including full and compiled scores, sheet music, published anthologies of music, interviews with cinema musicians, periodicals, and instruction books. Part II surveys the English-language scholarship on silent film music in articles, book chapters, essay collections, and monographs through 2015. The book is fully indexed for ease of access to these important sources on film music.
