These experts address how a new emphasis on effective policy design has re-emerged in public policy studies in recent years and clarify the role of historical policy decisions, policy capacities and government intentions in promoting a design orientation towards policy formulation and policy-making more generally. They examine many previously unexplored aspects of policy designs and designing activities, which focus upon analyzing and improving the sets of policy tools adopted by governments to correct policy problems. Ranging from the fundamentals of policy design and its place in greater policy studies, to new questions regarding policy design content and effectiveness, to contemporary design trends such as the use of digital tools and big data, the Routledge Handbook of Policy Design is a comprehensive reference for students and scholars of public policy, public administration and public management, government and business.

Urban Studies and Entrepreneurship -

Muhammad Naveed Iftikhar 2019-05-02

This book attempts to advance critical knowledge and practices for fostering a variety of entrepreneurship at a city level. The book aims to connect scholarship and policy practice in two disciplines: Urban Studies and Entrepreneurship. The book has included contributions from developed, emerging, and developing countries. The chapters are clubbed under five main sections; I. Startups and Entrepreneurial Opportunities, II. Knowledge Spillover, III. Social and Bureaucratic Entrepreneurialism, IV. Demography and Informal Entrepreneurs V. Perspectives from Emerging and Developing Economies. In this regard, the book explores a number of questions, such as: what are the important varieties of entrepreneurship, how can they be observed and measured, and how does each variety emerge and operate under various conditions of infrastructure and opportunity? Which type(s) of entrepreneurship should a city prefer? What can cities do to stimulate desirable forms of entrepreneurship or is it more of a spontaneous phenomenon? Why do policies that enhance entrepreneurship in some contexts seem instead to promote crony capitalism and rent-seeking in other contexts? Should cities focus on growing their own entrepreneurs and entrepreneurial enterprises or on luring them from other cities and countries? How can a collective action in a city promote (or hinder) entrepreneurship? The contributions in the present volume address head-on these questions at the intersection of

urban studies, economic theory, and the practicalities of economic development and urban governance, in a genuinely global range of places and applications.

The Politics and Crisis Management of Animal Health Security - John Connolly
2016-03-09

The Politics and Crisis Management of Animal Health Security addresses the 2001 foot and mouth epidemic in the United Kingdom - one of, if not the, most significant crises ever to face the UK farming industry. Underpinned by interviews with politicians and bureaucrats and with significant primary documentary analysis the book shows that the crisis was a critical juncture in how disease outbreaks have been planned and managed ever since. The author explores how this event affected policy and governance arrangements for managing subsequent disease-induced threats (such as avian influenza and bovine TB) and concludes by considering the 'temporality' of lesson learning by the UK government including the current and future challenges associated with managing incongruent risks (e.g., flood protection, swine flu and Ebola). This book provides students of public policy and administration with a significant illustration of how key concepts and analytical lenses from public policy can be applied to the study of the contours of practical policy change.

Implementing IT governance in the public sector by use of bootstrap algorithms - Petter Ogland 2017-11-29

It has been argued that the reason seventy percent of all IT projects fail is due to lack of a formal system for guiding and monitoring IT decisions. Organisations having explicit IT governance systems are generally twice as successful as those with poor governance, given the same strategic objectives, but implementing IT governance can be difficult. In this book, Dr. Ogland looks at the public sector and argues that the implementation of IT governance has to be done through bootstrapping. The bootstrap algorithm (BA) is a time-tested approach that is

known to work, but it is an approach that breaks with much of the logic of the public sector bureaucracy and is expected to be met with resistance. By analysing patterns in a study of trying to convince a Norwegian public sector organisation to implement IT governance through the use of the BA, the book is able to provide rich insights on what causes failure and how to make the implementation process succeed.

Sector - Wouter Van Dooren 2015-02-19

Managing Development in a Globalized World - Habib Zafarullah 2017-09-25

Traditionally, development has been rooted in ideologies and assumptions prevalent in the

developed world and in practices and strategies adopted by leading industrial nations. However, historically, eclectic ideas and approaches often clash with existing long-established notions of progress and modes of realizing social and economic change. *Managing Development in a Globalized World: Concepts, Processes, Institutions* explores this topic by incorporating ideas and interpretations that have previously been neglected or given inadequate attention in the discourse on developing countries. It underscores development as a continuous process that must be supported by sound policies and efficient management, supplying a wider understanding of the field. The authors argue that the application of innovative development techniques and best practices is essential for obtaining optimum results in meeting the needs of society. They examine the style of managing development with a new perspective that links the phenomenon with changing demands and the interplay of internal/external actors and a host of stakeholders. An exploration of key sectors in development provides clear comprehension of problems and solutions. A careful synthesis of theoretical/conceptual and empirical literature, the book assesses real-world situations and provides insight into the operational dynamics of development policies, programs, and institutions. It focuses on goals, values, and dynamics of development management that are undergoing rapid changes and continue to be enhanced to alleviate poverty and improve living standards in an era of globalization and inter-regional and inter-institutional synergies. It highlights best practices essential for the efficient and effective delivery of human development services that are designed and put in place to obtain optimum results in meeting the needs of society.

James 2022-12-26 China has traditionally been held up around the world as the archetype of centralised governance and a top-down system of public administration. But to what extent does this remain true of modern China? This book provides an updated perspective on modern China through a series of cutting edge, original studies focusing on public administration in China. The book opens with an overview of the key political institutions and the evolution of public administration research in China, followed by two distinct sections. Part I contains studies focusing on power, governance and administration. Part II focusses on 'what works' in solving wicked problems in Chinese society. The volume shows that China has seen some localisation and decentralisation, alongside experiments with collaboration and networked based policy making. However, the system of governance and public administration remains innately top-down and centralised with the center holding strong policy levers and control over society. As the pandemic revealed, this statist approach provided both governing opportunities and disadvantages. The chapters in this book were originally published as a special issue of Policy Studies.
